Data Quality Audit Report

Day 18 — Sample - Superstore Dataset

Area Checked	What I Looked For	What I Found	Meaning & Next Steps
Dataset Size	Verified record count and total columns to ensure full scope.	9,994 rows and 21 columns.	Passed — Perfectly aligns with baseline project requirements.
Missing Info	Scanned all 21 columns for blank, null, or missing cells.	0 missing values found.	Passed — Complete dataset; no imputation or missing value handling needed.
Duplicates	Checked for identical rows across all columns.	0 exact duplicate rows.	Passed — No risk of artificially inflated sales or order counts.
Dates & Logic	Validated date data types and checked if `Ship Date` ≥ `Order Date`.	Data types parsed cleanly. 0 invalid date logic rows.	Passed — Delivery timelines and shipping duration calculations are accurate.
Numerical Anomalies	Inspected negative quantities, unit prices, or profits.	0 negative sales/quantities. 1,871 negative profit rows.	Valid Losses — Negative profit represents valid business losses from heavy discounts; retain for loss analysis.
